3 Assignment

The Binary Search

- If the list is sorted, use a **binary search**.
- The binary search
 - Runs in $O(\log n)$ time.
 - Is very efficient.
 - Is suitable for *enormous* lists.

Outline

- 1 Binary Search
 - The Binary Search Algorithm
 - The Efficiency of the Algorithm
- 2 Examples
- 3 Assignment

The Binary Search Algorithm

- The list must be sorted for this algorithm to work.
- The Algorithm
 - Begin by comparing the value to the middle element.
 - If the value matches the middle element, then we are done.
 - If the value is less than the middle element, then
 - Continue the search in the first half of the array.
 - If the value is greater than the middle element, then
 - Continue the search in the second half of the array.
 - Quit if there are no elements left to search in the sublist.

Analysis of the Binary Search

15	20	25	32	36	40	48	50	55	63	64	70	84	90	96
0	1	2	3	4	5	6	7	8	9	10	11	12	13	14

Analysis of the Binary Search

Analysis of the Binary Search

Analysis of the Binary Search

Analysis of the Binary Search

Analysis of the Binary Search

- Best case: 1 comparison.
- Worst case: 4 comparisons.
- Average case:

$$\begin{aligned} & (1 + 2 + 2 + 3 + 3 + 3 + 3 + 4 + 4 + 4 + 4 + 4 + 4 + 4 + 4) / 15 \\ & = 49 / 15 \\ & = 3.267 \text{ comparisons.} \end{aligned}$$

 - The Efficiency of the Algorithm
- 2 Examples
- 3 Assignment

Efficiency of the Binary Search

- Best case requires 1 comparison.
- Worst case requires approximately $\log_2 n$ comparisons.
- Average case requires approximately $(\log_2 n) - 1$ comparisons, which is $O(\log n)$.
- There is a library function `bsearch()` in `cstdlib` that performs a binary search.

Efficiency of the Binary Search

- Can we perform a sequential search on a list of `Dates`?

Efficiency of the Binary Search

- Can we perform a sequential search on a list of `Dates`?
- Can we perform a binary search on a list of `Dates`?

Efficiency of the Binary Search

- Can we perform a sequential search on a list of `Dates`?
- Can we perform a binary search on a list of `Dates`?
- Can we perform a sequential search on a list of `Rationals`?

Efficiency of the Binary Search

- Can we perform a sequential search on a list of `Dates`?
- Can we perform a binary search on a list of `Dates`?
- Can we perform a sequential search on a list of `Rationals`?
- Can we perform a binary search on a list of `Rationals`?

Efficiency of the Binary Search

- Can we perform a sequential search on a list of `Dates`?
- Can we perform a binary search on a list of `Dates`?
- Can we perform a sequential search on a list of `Rationals`?
- Can we perform a binary search on a list of `Rationals`?
- Can we perform a sequential search on a list of `Points`?

Efficiency of the Binary Search

- Can we perform a sequential search on a list of `Dates`?
- Can we perform a binary search on a list of `Dates`?
- Can we perform a sequential search on a list of `Rationals`?
- Can we perform a binary search on a list of `Rationals`?
- Can we perform a sequential search on a list of `Points`?
- Can we perform a binary search on a list of `Points`?
