Assignment

## Exercise 36, p. 262.

- (a) How many different shoes produced by Plant A were priced at \$40 or higher?
- (b) The following are prices of all 20 sports shoes produced by Plant B:

27, 37, 29, 44, 31, 33, 34, 46, 58, 59

32, 32, 56, 57, 63, 33, 56, 58, 62, 51.

Make a histogram of shoe prices for Plant B. (Use a lower limit = 20, an upper limit = 65, and a class width = 5.)

Assignment

## Exercise 36, p. 262.

(e) An unknown shoe (that is, it is not known whether it was produced at Plant A or Plant B) has a price tag of \$55.

We wish to test the following hypotheses:

$H_0$ : Unknown shoe comes from Plant A.

$H_1$ : Unknown shoe comes from Plant B.

- (i) What is the direction of extreme?
- (ii) Find the  $p$ -value corresponding to the observed price of \$55.
- (iii) At  $\alpha = 0.05$ , what is your decision?

Koether

## Homework Review

Introduction

Measuring the Center

The Mean  
TI-83 Means

The Median  
TI-83 Medians

The Mode

Weighted Means

Assignment

## Solution

- (e) (i) The direction of extreme is to the left and the right (two-sided).
- (ii) Using the Plant A distribution ( $H_0$ ), there are 2 shoes with prices at least as great as \$55. And there are 2 shoes whose prices are equally extreme to the left ( $< \$35$ ). So the  $p$ -value is  $4/20 = 0.20$ .
- (iii) If  $\alpha = 0.05$ , then we accept  $H_0$  because  $p$ -value  $> \alpha$ .

Assignment

- Often, we would like to have one number that that is “representative” of a population or sample.
- It seems reasonable to choose a number that is near the “center” of the distribution rather than in the left or right extremes.
- But there is no single “correct” way to do this.
- Instead, we will have two (or three) ways to measure the center.

## Definition (Mean)

The **mean** is the simple average of a set of numbers.

## Definition (Median)

The **median** is the value that divides the set of numbers into a lower half and an upper half.

## Definition (Mode)

The **mode** is the most frequently occurring value in the set of numbers.

# Mean, Median, and Mode

- If a distribution is symmetric and unimodal, then the mean, median, and mode are all the same and are all at the center of the distribution.

Assignment

- We use the letter  $x$  to denote a value from the sample or population.
- The symbol  $\Sigma$  means “add them all up.”
- So,

$$\sum x$$

means add up all the values in the population or sample (depending on the context).

- Then the sample mean is

$$\frac{\sum x}{n}.$$

# The Mean
