Koether

### Introduction

Hypothesis  
Testing for the  
Mean

An Example

The Test  
Statistic

Conclusion of  
the Example

The TI-83

Summary

- In Chapter 10 we will ask the same basic questions as in Chapter 9, except they will concern the mean.
  - Find an estimate for the mean.
  - Test a hypothesis about the mean.
- We will begin with hypothesis testing.

# The Steps of Testing a Hypothesis

## Hypothesis Testing for Means

Robb T.  
Koether

Introduction

Hypothesis  
Testing for the  
Mean

An Example

The Test  
Statistic

Conclusion of  
the Example

The TI-83  
Summary

- 1 State the null and alternative hypotheses.
- 2 State the significance level.
- 3 Give the test statistic, including the formula.
- 4 Compute the value of the test statistic.
- 5 Compute the  $p$ -value.
- 6 State the decision.
- 7 State the conclusion.

# The Steps of Testing a Hypothesis

## Hypothesis Testing for Means

Robb T.  
Koether

Introduction

Hypothesis  
Testing for the  
Mean

An Example

The Test  
Statistic

Conclusion of  
the Example

The TI-83  
Summary

- 1 State the null and alternative hypotheses.
- 2 State the significance level.
- 3 Give the test statistic, including the formula.
- 4 Compute the value of the test statistic.
- 5 Compute the  $p$ -value.
- 6 State the decision.
- 7 State the conclusion.

# The Steps of Testing a Hypothesis

## Hypothesis Testing for Means

Robb T.  
Koether

Introduction

Hypothesis  
Testing for the  
Mean

An Example

The Test  
Statistic

Conclusion of  
the Example

The TI-83  
Summary

- 1 State the null and alternative hypotheses.
- 2 State the significance level.
- 3 Give the test statistic, including the formula.
- 4 Compute the value of the test statistic.
- 5 Compute the  $p$ -value.
- 6 State the decision.
- 7 State the conclusion.

Robb T.  
Koether

Introduction

Hypothesis  
Testing for the  
Mean

An Example

The Test  
Statistic

Conclusion of  
the Example

The TI-83  
Summary

- 1 State the null and alternative hypotheses.
- 2 State the significance level.
- 3 Give the test statistic, including the formula.
- 4 Compute the value of the test statistic.
- 5 Compute the  $p$ -value.
- 6 State the decision.
- 7 State the conclusion.

# The Hypotheses

## Hypothesis Testing for Means

Robb T.  
Koether

Introduction

Hypothesis  
Testing for the  
Mean

An Example

The Test  
Statistic

Conclusion of  
the Example

The TI-83

Summary

- The null and alternative hypotheses will be statements concerning  $\mu$ .
- Null hypothesis.

$$H_0 : \mu = \mu_0.$$

- Alternative hypothesis (choose one).
  - $H_1 : \mu < \mu_0$ .
  - $H_1 : \mu > \mu_0$ .
  - $H_1 : \mu \neq \mu_0$ .

# The Hypotheses

## Hypothesis Testing for Means

Robb T.  
Koether

Introduction

Hypothesis  
Testing for the  
Mean

An Example

The Test  
Statistic

Conclusion of  
the Example

The TI-83

Summary

- See Example 10.1, p. 616.
- The hypotheses are

$$H_0 : \mu = 15 \text{ mg}$$

$$H_1 : \mu < 15 \text{ mg}$$

# Level of Significance

## Hypothesis Testing for Means

Robb T.  
Koether

Introduction

Hypothesis  
Testing for the  
Mean

An Example

The Test  
Statistic

Conclusion of  
the Example

The TI-83

Summary

- The level of significance is the same as before.
- If the value is not given, assume that  $\alpha = 0.05$ .

# The Test Statistic

## Hypothesis Testing for Means

Robb T.  
Koether

Introduction

Hypothesis  
Testing for the  
Mean

An Example

The Test  
Statistic

Conclusion of  
the Example

The TI-83

Summary

- The choice of test statistic will depend on the sample size and what is known about the population. (Details to follow.)
- If we assume that  $\sigma$  is known and that either
  - The sample size  $n$  is at least 30, or
  - The population is normal,then the Central Limit Theorem for Means will apply.

# The Sampling Distribution of $\bar{x}$

## Hypothesis Testing for Means

Robb T. Koether

Introduction

Hypothesis Testing for the Mean

An Example

The Test Statistic

Conclusion of the Example

The TI-83

Summary

- If the population is **normal**, then the distribution of  $\bar{x}$  is also normal, with mean  $\mu_0$  and standard deviation  $\sigma/\sqrt{n}$

$$\bar{x} \text{ is exactly } N\left(\mu_0, \frac{\sigma}{\sqrt{n}}\right)$$

for **any sample size** (no matter how small).

- This assumes that  $\sigma$  is known.

# The Sampling Distribution of $\bar{x}$

## Hypothesis Testing for Means

Robb T.  
Koether

Introduction

Hypothesis  
Testing for the  
Mean

An Example

**The Test  
Statistic**

Conclusion of  
the Example

The TI-83

Summary

- Therefore, the test statistic is

$$Z = \frac{\bar{x} - \mu_0}{\sigma/\sqrt{n}}.$$

- It is exactly standard normal.

# The Sampling Distribution of $\bar{x}$

## Hypothesis Testing for Means

Robb T. Koether

Introduction

Hypothesis Testing for the Mean

An Example

The Test Statistic

Conclusion of the Example

The TI-83

Summary

- On the other hand, if
  - The **population is not normal**,
  - But the sample size  **$n$  is at least 30**,then the distribution of  $\bar{x}$  is approximately normal, with mean  $\mu_0$  and standard deviation  $\frac{\sigma}{\sqrt{n}}$ .

$$\bar{x} \text{ is approximately } N\left(\mu_0, \frac{\sigma}{\sqrt{n}}\right).$$

- We are still assuming that  $\sigma$  is known.

# The Sampling Distribution of $\bar{x}$

## Hypothesis Testing for Means

Robb T.  
Koether

Introduction

Hypothesis  
Testing for the  
Mean

An Example

The Test  
Statistic

Conclusion of  
the Example

The TI-83

Summary

- Therefore, the test statistic is

$$Z \approx \frac{\bar{x} - \mu_0}{\sigma / \sqrt{n}}.$$

- It is approximately standard normal.
- The approximation is good enough that we can use `normalcdf`.

# The Decision Tree

## Hypothesis Testing for Means

Robb T. Koether

Introduction

Hypothesis Testing for the Mean

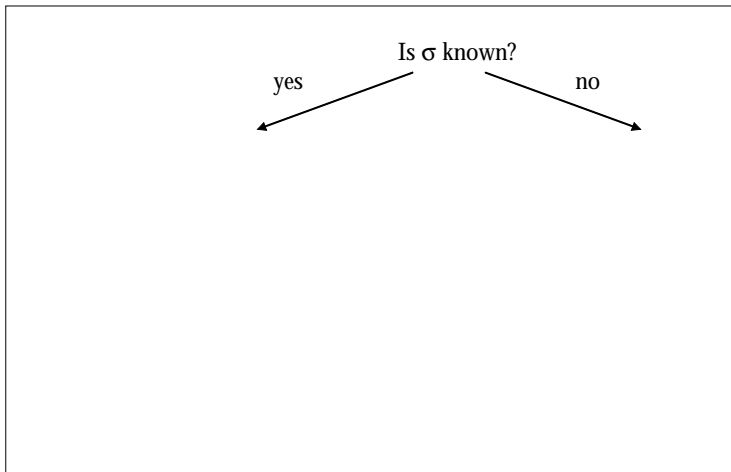

An Example

**The Test Statistic**

Conclusion of the Example

Conclusion of the Example

The TI-83

Summary

# Calculate the Value of the Test Statistic

## Hypothesis Testing for Means

Robb T. Koether

Introduction

Hypothesis Testing for the Mean

An Example

The Test Statistic

Conclusion of the Example

The TI-83

Summary

- In our sample, we find that  $\bar{x} = 12.528$ .
- We are assuming that  $\sigma = 4.8$ .
- Therefore,

$$Z = \frac{12.528 - 15}{4.8/\sqrt{25}} = \frac{-2.472}{0.96} = -2.575.$$

# Compute the $p$ -Value

## Hypothesis Testing for Means

Robb T.  
Koether

Introduction

Hypothesis  
Testing for the  
Mean

An Example

The Test  
Statistic

Conclusion of  
the Example

The TI-83

Summary

- The  $p$ -value is  $P(\bar{x} < -2.575)$ .
- Use `normalcdf(-E99, -2.575) = 0.005012`.
- Therefore,  $p$ -value = 0.005012.

# Decision

## Hypothesis Testing for Means

Robb T.  
Koether

Introduction

Hypothesis  
Testing for the  
Mean

An Example

The Test  
Statistic

Conclusion of  
the Example

The TI-83

Summary

- Because the  $p$ -value is less than  $\alpha$ , we will reject the null hypothesis.

# Conclusion

Hypothesis  
Testing for  
Means

Robb T.  
Koether

Introduction

Hypothesis  
Testing for the  
Mean

An Example

The Test  
Statistic

Conclusion of  
the Example

The TI-83

Summary

- We conclude that the carbon monoxide content of cigarettes is lower today than it was in the past.

# Exercise

## Hypothesis Testing for Means

Robb T.  
Koether

Introduction

Hypothesis  
Testing for the  
Mean

An Example

The Test  
Statistic

Conclusion of  
the Example

The TI-83

Summary

- Work the example “Completing a Maze” on page 620:
  - Under normal circumstances, mice complete a maze in an average time of 18 seconds, with a standard deviation of 2 seconds.
  - A researcher introduces loud noises. Will this cause the mice to run the maze faster?
  - A sample of 10 mice has an average time of 17 seconds.
  - Assume that their run times are normally distributed.
  - Test the hypothesis at the 10% level that the average run time is less when there is loud noise.

# Hypothesis Testing on the TI-83

## Hypothesis Testing for Means

Robb T. Koether

Introduction

Hypothesis Testing for the Mean

An Example

The Test Statistic

Conclusion of the Example

The TI-83

Summary

- Press `STAT`.
- Select `TESTS`.
- Select `Z-Test`. Press `ENTER`. A window appears requesting information.
- Select `Data` if you have the sample data entered into a list.
- Otherwise, select `Stats`.

# Hypothesis Testing on the TI-83

## Hypothesis Testing for Means

Robb T. Koether

Introduction

Hypothesis Testing for the Mean

An Example

The Test Statistic

Conclusion of the Example

The TI-83 Summary

- Assuming you selected `Stats`,
- Enter  $\mu_0$ , the hypothetical mean.
- Enter  $\sigma$ . (Remember,  $\sigma$  is known.)
- Enter  $\bar{x}$ .
- Enter  $n$ , the sample size.
- Select the type of alternative hypothesis.
- Select `Calculate` and press `ENTER`.

# Hypothesis Testing on the TI-83

## Hypothesis Testing for Means

Robb T. Koether

Introduction

Hypothesis Testing for the Mean

An Example

The Test Statistic

Conclusion of the Example

The TI-83

Summary

- A window appears with the following information.
- The title  $Z$ -Test.
- The alternative hypothesis.
- The value of the test statistic  $Z$ .
- The  $p$ -value of the test.
- The sample mean.
- The sample size.

# Example

## Hypothesis Testing for Means

Robb T.  
Koether

Introduction

Hypothesis  
Testing for the  
Mean

An Example

The Test  
Statistic

Conclusion of  
the Example

The TI-83

Summary

- Re-do Example 10.1 on the TI-83 using `Stats`.
- The TI-83 reports that
- $z = -2.575$ .
- $p\text{-value} = 0.005012$ .

# Hypothesis Testing on the TI-83

## Hypothesis Testing for Means

Robb T. Koether

Introduction

Hypothesis Testing for the Mean

An Example

The Test Statistic

Conclusion of the Example

The TI-83

Summary

- Suppose we had selected `Data` instead of `Stats`.
- Then somewhat different information is requested.
- Enter the hypothetical mean.
- Enter  $\sigma$ . (Why?)
- Identify the list that contains the data.
- Skip `Freq` (it should be 1).
- Select the alternative hypothesis.
- Select `Calculate` and press `ENTER`.

# Example

## Hypothesis Testing for Means

Robb T.  
Koether

Introduction

Hypothesis  
Testing for the  
Mean

An Example

The Test  
Statistic

Conclusion of  
the Example

The TI-83  
Summary

- Re-do Example 10.1 on the TI-83 using Data.
- Enter the data in the chart on page 616 into list  $L_1$ .
- The TI-83 reports that
- $z = -2.575$ .
- $p\text{-value} = 0.005012$ .
- $\bar{x} = 12.528$ .
- $s = 4.740$  ( $\sigma = 4.8$ ).

# Summary

## Hypothesis Testing for Means

Robb T.  
Koether

Introduction

Hypothesis  
Testing for the  
Mean

An Example

The Test  
Statistic

Conclusion of  
the Example

The TI-83

Summary

- The seven steps are the same as in Chapter 9.
- If  $\sigma$  is known, then the test statistic is  $Z$  provided
  - The population is normal, or
  - The sample size  $n$  is at least 30.
- The TI-83 function Z-Test will perform steps 4 and 5 of this hypothesis test.
