Requirements for Hand-In Homework
Statistics

Dr. Marcus Pendergrass
Hampden-Sydney College

1. Please keep a spiral-bound notebook for your homework. You may also keep your class notes in this same notebook.

2. The honor pledge should be written out on the inside cover of the notebook. All work in the notebook is pledged.

3. Each problem should be written up as follows:
   • Identifying information: problem number, chapter number
   • Solution of the problem.

   (Note: Because the problem statement for a statistics problem tends to be rather long, I do not require you to state the problem in your write-ups.)

4. Your solution should be written up neatly. Scratch work, incorrect attempts, and anything else extraneous to the correct solution should not appear.

5. Significant graphs - such as histograms, time plots, etc. - should be done on graph paper. Paste or tape the graph into your homework notebook on the page following your solution.

6. If software (calculator or computer) was used in the solution of the problem, your written solution should clearly show the commands and inputs to the software that you used.

7. You may also paste or tape into your notebook output from software, such as graphs.
