The Cheapest-Link Algorithm

Definition (Cheapest-Link Algorithm)

The **Cheapest-Link Algorithm** begins with the edge of least weight and makes it part of the circuit.

- Then it selects the edge of second-smallest weight, and so on.

Definition (Cheapest-Link Algorithm)

The **Cheapest-Link Algorithm** begins with the edge of least weight and makes it part of the circuit.

- Then it selects the edge of second-smallest weight, and so on.
- Once a vertex has two selected edges, no more edges of that vertex are considered.

- Once a vertex has two selected edges, no more edges of that vertex are considered.
- And we must avoid creating a circuit prematurely.
- Eventually the chosen edges will form a circuit.
