

Homework Solutions
Chapter 7 – Page 481

Exercise 66(a)-(c)

(a)

- (b) The mean waiting time is 37.5 minutes. The distribution is symmetric, so the mean must be in the middle.
- (c) Six weeks is 42 days. The probability of waiting at least 42 days is represented by the area under the graph from 42 to 45. That area is $\frac{3}{15} = \frac{1}{5}$.
